

2. Amendments to the Claims:

Please cancel Claims 1-339.

340. A system for testing one or more skills associated with the reading skills of an individual, comprising:

a server computer comprising one or more tests for determining deficiencies in one or more reading and pre-reading skills, a scorer for determining a score for each test;

a teacher station for downloading the tests from the server computer; and

one or more student computers that establish a communications session with the teacher station over a computer network, each student computer comprising means for displaying at least one of a graphical image and audio associated with each test located on the server, means for receiving a user response to one of the graphical images and audio presented by each test, and means for communicating the responses for each test back to the server computer.

341. The system of Claim 340, wherein each client computer further comprises means for motivating the user to complete the tests.

342. The system of Claim 340, wherein the server further comprises a questionnaire having one or more questions for eliciting information about risk factors associated with language-based learning disabilities.

343. The system of Claim 342, wherein the information comprises historical data about reading-related risk factors including one or more of medical conditions including chronic otitis media, family history data including history of dyslexia, environmental data including socioeconomic status and exposure to literacy at home and observational data about an individual's behaviors reflecting competencies in speech sound awareness.

344. The system of Claim 340, wherein the user input device of the one or more client computers comprise a speech recognition device for receiving a verbal response from the user to the one or more tests.

345.(Currently Amended) The system of Claim 340, wherein the one or more tests comprise a rhyme recognition test for testing the ability to recognize rhymes, a rhyme generation test for testing the ability to generate rhymes, a beginning and ending sound recognizer for testing the ability to recognize the beginning and ending sounds of a word, a word decoder test for testing the ability to read by sounding out a written word, a sound blender test for testing the ability to blend sound units together to form words, a sound segmenting test for testing the ability to segment a sound unit into smaller sound units, a sound manipulator test for testing the ability to manipulate sound units to form a new unit, a sequential verbal recall test for testing the ability to recall a sequence of spoken items, a rapid naming test for testing the ability to rapidly name one or more items, and a letter naming and symbol/sound association test for testing the ability to name letters and identify the association between a symbol and an associated sound, ~~and a fluent reader test for testing the ability to read fluently.~~

346. The system of Claim 340, wherein the tests further comprise a rhyme recognition test further comprising means for providing at least two stimuli to the user and means for receiving user input in response to the at least two stimuli to determine the user's ability to recognize rhyming words.

347. The system of Claim 340, wherein the tests further comprise a test for recognizing the beginning sound of a stimulus, the test comprising means for generating at least one stimulus having at least an initial phoneme and means for receiving a response to the stimulus that indicates an ability of the test taker to recognize the initial phoneme of the stimulus.

348. The system of Claim 340, wherein the tests further comprise a test for recognizing the ending sound of a stimulus, the test comprising means for generating at least one stimulus having at least an ending phoneme and means for receiving a response to the stimulus that indicates an ability of the test taker to recognize the ending phoneme of the stimulus.

349. The system of Claim 340, wherein the tests further comprise a rhyme generation test comprising means for generating a stimulus and means for receiving a response from the user identifying a sound unit that rhymes with the stimulus.

350. The system of Claim 340, wherein the tests further comprise a sound blender test comprising means for generating at least two sound stimuli and means for receiving a user response to the at least two sound stimuli, the response indicating an ability to blend the at least two sound stimuli into a larger sound unit.

351. The system of Claim 340, wherein the tests further comprise a sound segmentation test comprising means for generating at least one stimulus and means for receiving a response to the stimulus comprising means for segmenting the stimulus into smaller units in order to test the ability to segment the stimulus into smaller units.

352. The system of Claim 340, wherein the tests comprise a sound manipulation test comprising means for generating a sound stimulus having one or more sound units and means, in response to the sound stimulus, for manipulating the sound units of the sound stimulus to test the ability to manipulate sound units.

353. The system of Claim 340, wherein the tests further comprise a verbal recall test comprising means for generating at least one sound stimulus and means, in response to the at least one sound stimulus, for receiving a user response indicating the recalling of the at least one sound stimulus.

354. The system of Claim 344 further comprising means for speaking a verbal response into the speech recognition device for receiving a verbal response from the user.

355. The system of Claim 340, wherein the tests further comprise a naming test comprising means for generating at least one visual stimulus and means, in response to the

display of the visual stimulus, for speaking the name of or the sound associated with the visual stimulus using the speech recognition device.

356. The system of Claim 340, wherein the tests further comprise a word decoder test comprising means for displaying a visual stimulus to the user and means, in response to the visual stimulus, for receiving a response from the user to determine the ability to read the visual stimulus.

357. Cancelled.

358. The system of Claim 341, wherein the motivation means further comprises means for generating a graphical image and an associated sound to motivate the user to complete the tests.

359. The system of Claim 358, wherein the motivation means further comprises means for generating the graphical image and associated sound after a first predetermined number of tests are completed and means for generating another graphical image and associated sound after a second predetermined number of tests are completed.

360. The system of Claim 359, wherein the generating means further comprises means for generating a graphical image indicating the number of tests remaining to be completed.

361. The system of Claim 359, wherein the motivation means further comprises means for generating the graphical image and associated sound after a third predetermined number of tests.

362. The system of 340 her comprising a recommender for recommending, based on the scores of the one or more tests, one or more training modules for improving a reading or pre-reading skill of the individual as indicated by the score of the tests.

363. The system of Claim 362, wherein the recommender further comprises means for downloading the recommended training module to the student computer.

364. The system of Claim 362, wherein the recommender further comprises means for storing the incorrect responses to the one or more tests and means for generating a training module recommendation based on the incorrect responses.

365. The system of Claim 364, wherein the recommender further comprises means for comparing each incorrect response to one or more error measures to identify an error associated with each incorrect response and means for generating a training module recommendation based on the identified error.

366. The system of Claim 365, wherein the comparing means further comprises means for identifying one or more errors for each incorrect response.

367. The system of Claim 365, wherein the recommender further comprises means for identifying a deficient skill by comparing the identified error to a deficient skill rule and means for generating a training module recommendation based on the identified deficient skill.

368. The system of 340, wherein the server further comprises means for dynamically generating one or more data reports that illustrate the data associated with the one or more tests.

369. The system of Claim 368, wherein the data reports further comprises means for displaying the test results simultaneously for one or more students.

370. The system of Claim 369, wherein the displaying means further comprises means for displaying the percentage of correct responses for a test.

371. The system of Claim 369, wherein the displaying means further comprises means for displaying the results for one or more different tests for each user wherein the results for each test are displayed in a different color.

372. The system of Claim 368, wherein the data report generator further comprises a user interface for browsing other test data for a user.

373. The system of Claim 368, wherein the data report generator further comprises means for determining the number of user test results shown.

374. The system of Claim 368, wherein the data report generator further comprises means for permitting the user to select a data report print format.

375. The system of Claim 368, wherein the data report generator further comprises means for permitting the user to select a data report display format.

376. The system of Claim 368, wherein the data report generator further comprises means for generating a data report for one or more students in a class, means for generating a data report for one or more classes each having one or more students and means for generating a data report for a school having one or more classes.

377. The system of Claim 340, wherein the teacher station further comprises means for communicating the response for each test for each student back to the server computer.

378. The system of Claim 377, wherein the teacher station further comprises means for detecting a break in the communication between the teacher station and the server computer and means for resending any test data that was not sent due to the communications break.

379. The system of Claim 340, wherein each student computer further comprises means for connecting to the server computer and means for downloading the resources necessary to execute the current test when the test is started.

380. The system of Claim 340, wherein the teacher station further comprises means for generating a classroom layout showing an icon for each student computer.

381. The system of Claim 380, wherein the teacher station further comprises means for monitoring each student's test progress and controlling each student computer.

382. The system of Claim 380, wherein the teacher station further comprises means for collecting student test data.

383. The system of Claim 380, wherein generating the layout further comprises means for coloring each icon depending on the state of testing for the particular student computer.

384.(Currently Amended) The system of Claim 340 F, wherein the teacher station further comprises means for generating one or more separate accounts for the diagnostic system, wherein the accounts include an account manager for managing an entire school or district of users of the diagnostic system, a lead teacher for managing the use of the diagnostic system by one or more classroom teachers in a particular school and one or more classroom teachers who each administer the diagnostic testing for a particular class of students.

385.(Currently Amended) The system of Claim ~~F+40~~ 384, wherein the teacher station further comprises means for the account manager to register one or more lead teachers and means for each lead teacher to register one or more classroom teachers who administer the test.

386.(Currently Amended) The system of Claim 385 ~~F+41~~, wherein the account manager has access to testing data for the entire district, wherein the lead teacher has access to testing data for the entire school and each classroom teacher has access to testing data for the class of the classroom teacher.

387. A method for testing one or more skills associated with the reading skills of an individual, comprising:

storing instructions corresponding to one or more tests on a server for determining deficiencies in one or more reading and pre-reading skills and a scorer for determining a score for each test;

downloading the one or more tests from the server computer to a teacher station;
displaying at least one of a graphical image and audio associated with each test located on the server at the client computer connected to the teacher station;
receiving a user response to one of the graphical images and audio presented by each test at the client computer connected to the teacher station;
communicating the responses for each test back to the teacher station; and

388.(Currently Amended) The method of Claim 387 F further comprising motivating the user to complete the tests.

389. (Currently Amended) The method of Claim 387 F further comprising generating a questionnaire having one or more questions for eliciting information about risk factors associated with language-based learning disabilities.

390. (Currently Amended) The method of Claim 389 F+2, wherein the information comprises historical data about reading-related risk factors including one or more of medical conditions including chronic otitis media, family history data including history of dyslexia, environmental data including socioeconomic status and exposure to literacy at home and observational data about an individual's behaviors reflecting competencies in speech sound awareness.

391. (Currently Amended) The method of Claim 387 F further comprising receiving a verbal response from a user to one or more tests using a speech recognition device.

392. (Currently Amended) The method of Claim F 387, wherein the one or more tests comprise a rhyme recognition test for testing the ability to recognize rhymes, a rhyme generation test for testing the ability to generate rhymes, a beginning and ending sound recognizer for testing the ability to recognize the beginning and ending sounds of a word, a word decoder test for testing the ability to read by sounding out a written word, a sound blender test for testing the ability to blend sound units together to form words, a sound segmenting test for testing the ability to segment a sound unit into smaller sound units, a sound manipulator test for testing the

ability to manipulate sound units to form a new unit, a sequential verbal recall test for testing the ability to recall a sequence of spoken items, a rapid naming test for testing the ability to rapidly name one or more items, a letter naming and symbol/sound association test for testing the ability to name letters and identify the association between a symbol and an associated sound, and a fluent reader test for testing the ability to read fluently.

393. (Currently Amended) The method of Claim 387 F, wherein the tests further comprise a rhyme recognition test further comprising providing at least two stimuli to the user and receiving user input in response to the at least two stimuli to determine the user's ability to recognize rhyming words.

394. (Currently Amended) The method of Claim 387 F, wherein the tests further comprise a test for recognizing the beginning sound of a stimulus, the test comprising generating at least one stimulus having at least an initial phoneme and receiving a response to the stimulus that indicates an ability of the test taker to recognize the initial phoneme of the stimulus.

395. (Currently Amended) The method of Claim 387 F, wherein the tests further comprise a test for recognizing the ending sound of a stimulus, the test comprising generating at least one stimulus having at least an ending phoneme and receiving a response to the stimulus that indicates an ability of the test taker to recognize the ending phoneme of the stimulus.

396. (Currently Amended) The method of Claim 387 F, wherein the tests further comprise a rhyme generation test comprising generating a stimulus and receiving a response from the user identifying a sound unit that rhymes with the stimulus.

397. (Currently Amended) The method of Claim 387 F, wherein the tests further comprise a sound blender test comprising generating at least two sound stimuli and receiving a user response to the at least two sound stimuli, the response indicating an ability to blend the at least two sound stimuli into a larger sound unit.

398. (Currently Amended) The method of Claim 387 F, wherein the tests further comprise a sound segmentation test comprising generating at least one stimulus and receiving a response to the stimulus comprising means for segmenting the stimulus into smaller units in order to test the ability to segment the stimulus into smaller units.

399. (Currently Amended) The method of Claim 387 F, wherein the tests comprise a sound manipulation test comprising generating a sound stimulus having one or more sound units and, in response to the sound stimulus, manipulating the sound units of the sound stimulus to test the ability to manipulate sound units.

400. (Currently Amended) The method of Claim 387 F, wherein the tests further comprise a verbal recall test comprising generating at least one sound stimulus and, in response to the at least one sound stimulus, receiving a user response indicating the recalling of the at least one sound stimulus.

401. (Currently Amended) The method of Claim 400 F+4 further comprising speaking a verbal response into the speech recognition device for receiving a verbal response from the user.

402. (Currently Amended) The method of Claim 387 F, wherein the tests further comprise a naming test comprising generating at least one visual stimulus and, in response to the display of the visual stimulus, speaking the name of or the sound associated with the visual stimulus using the speech recognition device.

403. (Currently Amended) The method of Claim 387 F, wherein the tests further comprise a word decoder test comprising displaying a visual stimulus to the user and, in response to the visual stimulus, receiving a response from the user to determine the ability to read the visual stimulus.

404. Cancelled.

405. (Currently Amended) The method of Claim 387 F, wherein the motivation further comprises generating a graphical image and an associated sound to motivate the user to complete the tests.

406. (Currently Amended) The method of Claim 388 F+19, wherein the motivation further comprises generating the graphical image and associated sound after a first predetermined number of tests are completed and generating another graphical image and associated sound after a second predetermined number of tests are completed.

407. (Currently Amended) The method of Claim 406 F+20, wherein the generating further comprises generating a graphical image indicating the number of tests remaining to be completed.

408. (Currently Amended) The method of Claim 406 F+20, wherein the motivation further comprises generating the graphical image and associated sound after a third predetermined number of tests.

409. (Currently Amended) The method of Claim 387 F further ~~comprising~~ comprising, based on the test scores, recommending a training module to improve the skill of a user.

410. (Currently Amended) The method of Claim 409 F+1, wherein the recommender further comprises downloading the recommended training module to the client computer.

411. (Currently Amended) The method of Claim 409 F+1, wherein the recommender further comprises storing the incorrect responses to the one or more tests and generating a training module recommendation based on the incorrect responses.

412. (Currently Amended) The method of Claim 411 F+23, wherein the recommender further comprises comparing each incorrect response to one or more error measures to identify an error associated with each incorrect response and generating a training module recommendation based on the identified error.

413. (Currently Amended) The method of Claim 412 F+24, wherein the comparing further comprises identifying one or more errors for each incorrect response.

414. (Currently Amended) The method of Claim 412 F+24, wherein the recommender further comprises identifying a deficient skill by comparing the identified error to a deficient skill rule and generating a training module recommendation based on the identified deficient skill.

415. (Currently Amended) The method of Claim 387 F further comprising dynamically generating one or more data reports that illustrate the data associated with the one or more tests.

416. (Currently Amended) The method of Claim 415 F+27, wherein the data reports further comprises displaying the test results simultaneously for one or more students.

417. (Currently Amended) The method of Claim 416 F+28, wherein the displaying further comprises displaying the percentage of correct responses for a test.

418. (Currently Amended) The method of Claim 417 F+28, wherein the displaying further comprises displaying the results for one or more different tests for each user wherein the results for each test are displayed in a different color.

419. (Currently Amended) The method of Claim 415 F+27, wherein the data report generator further comprises a user interface for browsing other test data for a user.

420. (Currently Amended) The method of Claim 415 F+27, wherein the data report generator further comprises determining the number of user test results shown.

421. (Currently Amended) The method of Claim 415 F+27, wherein the data report generator further comprises permitting the user to select a data report print format.

422. (Currently Amended) The method of Claim 415 F+27, wherein the data report generator further comprises permitting the user to select a data report display format.

423. (Currently Amended) The method of Claim 415 F+27, wherein the data report generator further comprises generating a data report for one or more students in a class, generating a data report for one or more classes each having one or more students and generating a data report for a school having one or more classes.

424. (Currently Amended) The method of Claim 387 F, wherein the client computer further comprises a teacher station that downloads the tests from the server and one or more student computers connected to the teacher station by a network, each student computer further comprising displaying at least one of a graphical image and audio associated with each test located on the server, receiving a user response to one of the graphical images and audio presented by each test and communicating the responses for each test back to the teacher station.

425. (Currently Amended) The method of Claim 424 F+33, wherein the teacher station further comprises communicating the response for each test for each student back to the server computer.

426. (Currently Amended) The method of Claim 425 F+34, wherein the teacher station further comprises detecting a break in the communication between the teacher station and the server computer and resending any test data that was not sent due to the communications break.

427. (Currently Amended) The method of Claim 424 F+33, wherein each student computer further comprises connecting to the server computer and downloading the resources necessary to execute the current test when the test is started.

428. (Currently Amended) The method of Claim 424 F+33, wherein the teacher station further comprises generating a classroom layout showing an icon for each student computer.

429. The method of Claim 428, wherein the teacher station further comprises monitoring each student's test progress and controlling each student computer.

430. The method of Claim 428, wherein the teacher station further comprises collecting student test data.

431. The method of Claim 428, wherein generating the layout further comprises coloring each icon depending on the state of testing for the particular student computer.

432. The method of Claim 424, wherein the teacher station further comprises generating one or more separate accounts for the diagnostic system, wherein the accounts include an account manager for managing an entire school or district of users of the diagnostic system, a lead teacher for managing the use of the diagnostic system by one or more classroom teachers in a particular school and one or more classroom teachers who each administer the diagnostic testing for a particular class of students.

433. The method of Claim 432, wherein the teacher station further comprises a user interface for the account manager to register one or more lead teachers and a user interface for each lead teacher to register one or more classroom teachers who administer the test.

434. The method of Claim 433, wherein the account manager has access to testing data for the entire district, wherein the lead teacher has access to testing data for the entire school and each classroom teacher has access to testing data for the class of the classroom teacher.

435. A dual server system for testing one or more skills associated with the reading skills of an individual, comprising:

a server computer comprising one or more tests for determining deficiencies in one or more reading and pre-reading skills, a scorer for determining a score for each test;

a teacher station for downloading the tests from the server computer; and

wherein the teacher station is connected to one or more student computer over a computer network, the teacher station further comprising means for establishing a communications session

with each student computer so that each student computer displays at least one of a graphical image and audio associated with each test located on the server, receives a user response to one of the graphical images and audio presented by each test, and communicates the responses for each test back to the teacher station.

436. The system of Claim 435, wherein each client computer further comprises means for motivating the user to complete the tests.

437. The system of Claim 435, wherein the server further comprises a questionnaire having one or more questions for eliciting information about risk factors associated with language-based learning disabilities.

438. The system of Claim 437, wherein the information comprises historical data about reading-related risk factors including one or more of medical conditions including chronic otitis media, family history data including history of dyslexia, environmental data including socioeconomic status and exposure to literacy at home and observational data about an individual's behaviors reflecting competencies in speech sound awareness.

439. The system of Claim 435, wherein the user input device of the one or more client computers comprise a speech recognition device for receiving a verbal response from the user to the one or more tests.

440. (Currently Amended) The system of Claim 435, wherein the one or more tests comprise a rhyme recognition test for testing the ability to recognize rhymes, a rhyme generation test for testing the ability to generate rhymes, a beginning and ending sound recognizer for testing the ability to recognize the beginning and ending sounds of a word, a word decoder test for testing the ability to read by sounding out a written word, a sound blender test for testing the ability to blend sound units together to form words, a sound segmenting test for testing the ability to segment a sound unit into smaller sound units, a sound manipulator test for testing the ability to manipulate sound units to form a new unit, a sequential verbal recall test for testing the ability to recall a sequence of spoken items, a rapid naming test for testing the ability to rapidly

name one or more items, and a letter naming and symbol/sound association test for testing the ability to name letters and identify the association between a symbol and an associated sound; ~~and a fluent reader test for testing the ability to read fluently.~~

441. The system of Claim 435, wherein the tests further comprise a rhyme recognition test further comprising means for providing at least two stimuli to the user and means for receiving user input in response to the at least two stimuli to determine the user's ability to recognize rhyming words.

442. The system of Claim 435, wherein the tests further comprise a test for recognizing the beginning sound of a stimulus, the test comprising means for generating at least one stimulus having at least an initial phoneme and means for receiving a response to the stimulus that indicates an ability of the test taker to recognize the initial phoneme of the stimulus.

443. The system of Claim 435, wherein the tests further comprise a test for recognizing the ending sound of a stimulus, the test comprising means for generating at least one stimulus having at least an ending phoneme and means for receiving a response to the stimulus that indicates an ability of the test taker to recognize the ending phoneme of the stimulus.

444. The system of Claim 435, wherein the tests further comprise a rhyme generation test comprising means for generating a stimulus and means for receiving a response from the user identifying a sound unit that rhymes with the stimulus.

445. The system of Claim 435, wherein the tests further comprise a sound blender test comprising means for generating at least two sound stimuli and means for receiving a user response to the at least two sound stimuli, the response indicating an ability to blend the at least two sound stimuli into a larger sound unit.

446. The system of Claim 435, wherein the tests further comprise a sound segmentation test comprising means for generating at least one stimulus and means for receiving

a response to the stimulus comprising means for segmenting the stimulus into smaller units in order to test the ability to segment the stimulus into smaller units.

447. The system of Claim 435, wherein the tests comprise a sound manipulation test comprising means for generating a sound stimulus having one or more sound units and means, in response to the sound stimulus, for manipulating the sound units of the sound stimulus to test the ability to manipulate sound units.

448. The system of Claim 435, wherein the tests further comprise a verbal recall test comprising means for generating at least one sound stimulus and means, in response to the at least one sound stimulus, for receiving a user response indicating the recalling of the at least one sound stimulus.

449. The system of Claim 439 further comprising means for speaking a verbal response into the speech recognition device for receiving a verbal response from the user.

450. The system of Claim 435, wherein the tests further comprise a naming test comprising means for generating at least one visual stimulus and means, in response to the display of the visual stimulus, for speaking the name of or the sound associated with the visual stimulus using the speech recognition device.

451. The system of Claim 435, wherein the tests further comprise a word decoder test comprising means for displaying a visual stimulus to the user and means, in response to the visual stimulus, for receiving a response from the user to determine the ability to read the visual stimulus.

452. Cancelled.

453. The system of Claim 436, wherein the motivation means further comprises means for generating a graphical image and an associated sound to motivate the user to complete the tests.

454. The system of Claim 453, wherein the motivation means further comprises means for generating the graphical image and associated sound after a first predetermined number of tests are completed and means for generating another graphical image and associated sound after a second predetermined number of tests are completed.

455. The system of Claim 454, wherein the generating means further comprises means for generating a graphical image indicating the number of tests remaining to be completed.

456. The system of Claim 454, wherein the motivation means further comprises means for generating the graphical image and associated sound after a third predetermined number of tests.

457. The system of Claim 435 further comprising a recommender for recommending, based on the scores of the one or more tests, one or more training modules for improving a reading or pre-reading skill of the individual as indicated by the score of the tests.

458. The system of Claim 457, wherein the recommender further comprises means for downloading the recommended training module to the student computer.

459. The system of Claim 457, wherein the recommender further comprises means for storing the incorrect responses to the one or more tests and means for generating a training module recommendation based on the incorrect responses.

460. The system of Claim 459, wherein the recommender further comprises means for comparing each incorrect response to one or more error measures to identify an error associated with each incorrect response and means for generating a training module recommendation based on the identified error.

461. The system of Claim 460, wherein the comparing means further comprises means for identifying one or more errors for each incorrect response.

462. The system of Claim 460 wherein the recommender further comprises means for identifying a deficient skill by comparing the identified error to a deficient skill rule and means for generating a training module recommendation based on the identified deficient skill.

463. The system of Claim 435, wherein the server further comprises means for dynamically generating one or more data reports that illustrate the data associated with the one or more tests.

464. The system of Claim 463, wherein the data reports further comprises means for displaying the test results simultaneously for one or more students.

465. The system of Claim 464, wherein the displaying means further comprises means for displaying the percentage of correct responses for a test.

466. The system of Claim 464, wherein the displaying means further comprises means for displaying the results for one or more different tests for each user wherein the results for each test are displayed in a different color.

467. The system of Claim 463, wherein the data report generator further comprises a user interface for browsing other test data for a user.

468. The system of Claim 463, wherein the data report generator further comprises means for determining the number of user test results shown.

469. The system of Claim 463, wherein the data report generator further comprises means for permitting the user to select a data report print format.

470. The system of Claim 463, wherein the data report generator further comprises means for permitting the user to select a data report display format.

471. The system of Claim 463, wherein the data report generator further comprises means for generating a data report for one or more students in a class, means for generating a data report for one or more classes each having one or more students and means for generating a data report for a school having one or more classes.

472. The system of Claim 435, wherein the teacher station further comprises means for communicating the response for each test for each student back to the server computer.

473. The system of Claim 472, wherein the teacher station further comprises means for detecting a break in the communication between the teacher station and the server computer and means for resending any test data that was not sent due to the communications break.

474. The system of Claim 435, wherein each student computer further comprises means for connecting to the server computer and means for downloading the resources necessary to execute the current test when the test is started.

475. The system of Claim 435, wherein the teacher station further comprises means for generating a classroom layout showing an icon for each student computer.

476. The system of Claim 475, wherein the teacher station further comprises means for monitoring each student's test progress and controlling each student computer.

477. The system of Claim 475, wherein the teacher station further comprises means for collecting student test data.

478. The system of Claim 475, wherein generating the layout further comprises means for coloring each icon depending on the state of testing for the particular student computer.

479. The system of Claim 435, wherein the teacher station further comprises means for generating one or more separate accounts for the diagnostic system, wherein the accounts include an account manager for managing an entire school or district of users of the diagnostic system, a

lead teacher for managing the use of the diagnostic system by one or more classroom teachers in a particular school and one or more classroom teachers who each administer the diagnostic testing for a particular class of students.

480. The system of Claim 479, wherein the teacher station further comprises means for the account manager to register one or more lead teachers and means for each lead teacher to register one or more classroom teachers who administer the test.

481. The system of Claim 480, wherein the account manager has access to testing data for the entire district, wherein the lead teacher has access to testing data for the entire school and each classroom teacher has access to testing data for the class of the classroom teacher.
